

- (ii) The resistance of a metal wire at  $20^{\circ}\text{C}$  is  $1.05\ \Omega$  and at  $100^{\circ}\text{C}$  is  $1.38\ \Omega$ . Determine the temperature coefficient of resistivity of this metal.

Alternatively

$$R_1 = R_0(1 + \alpha \Delta T_1) \dots\dots\dots(i)$$

$$R_2 = R_0(1 + \alpha \Delta T_2) \dots\dots\dots(ii)$$

$$R_1/R_2 = \frac{(1 + \alpha \Delta T_1)}{(1 + \alpha \Delta T_2)}$$

$$\frac{1.05}{1.38} = \frac{1 + 20\alpha}{1 + 100\alpha}$$

On solving

$$\begin{aligned}\alpha &= \frac{11}{2580} \text{ } ^\circ\text{C}^{-1} \\ &= 0.0042 \text{ } ^\circ\text{C}^{-1}\end{aligned}$$

8. The resistivity  $\rho$  of a metal increases with rise in temperature because :
- (A) only relaxation time ' $\tau$ ' of electrons decreases with temperature.
  - (B) only number of electrons per unit volume ' $n$ ' increases appreciably.
  - (C) ' $\tau$ ' decreases with temperature but ' $n$ ' does not change appreciably.
  - (D) ' $\tau$ ' decreases with temperature and ' $n$ ' increases.

8. The resistivity  $\rho$  of a metal increases with rise in temperature because :
- (A) only relaxation time ' $\tau$ ' of electrons decreases with temperature.
  - (B) only number of electrons per unit volume ' $n$ ' increases appreciably.
  - (C) ' $\tau$ ' decreases with temperature but ' $n$ ' does not change appreciably.
  - (D) ' $\tau$ ' decreases with temperature and ' $n$ ' increases.

CBSE 26

(C)  $\tau$  decreases with temperature but ' $n$ ' does not change appreciably.

10. Which of the following statements is true about mobility of charge carriers in a metal ?

- (A) Mobility increases with increase in applied electric field.
- (B) Mobility decreases with increase in temperature.
- (C) Mobility is independent of the mass of the charge carrier.
- (D) Mobility increases with increase in temperature

10. Which of the following statements is true about mobility of charge carriers in a metal ?

- (A) Mobility increases with increase in applied electric field.
- (B) Mobility decreases with increase in temperature.
- (C) Mobility is independent of the mass of the charge carrier.
- (D) Mobility increases with increase in temperature

CBSE 26

(B) Mobility decreases with increase in temperature.

20. A heating element using nichrome is connected to a 220 V supply. Initially it draws a current of 2.9 A. After some time, the current attains a steady value of 2.5 A. Find the steady temperature of the heating element if the room temperature is 27 °C. The temperature coefficient of resistance of nichrome is  $1.7 \times 10^{-4} \text{ }^{\circ}\text{C}^{-1}$ .

Current flowing  $I = neAv_d$

1/2

$$I = neAv_d \frac{eV\tau}{m\ell} = \frac{ne^2AV\tau}{m\ell}$$

1/2

$$\frac{I}{V} = \frac{ne^2A\tau}{m\ell} = \frac{1}{R} \text{ -----(i)}$$

Also,  $R = \rho \frac{\ell}{A}$  -----(ii)

Comparing (i) and (ii)

$$\rho = \frac{m}{ne^2\tau}$$

1/2

Resistivity of the material of a conductor depends on the relaxation time, i.e., temperature and the number density of electrons.

1/2+ 1/2

iii) Because constantan and manganin show very weak dependence of resistivity on temperature
